Acknowledgements

(1) We would like to thank all the dedicated staff and volunteers at the McGill Bird Observatory, especially Shawna Sevigny and Ana Morales for banding the Northern Cardinals, installing Motus tags, assisting with translocations over both years, and teaching me bird banding and tag deployment. Tracking cardinals over eight months was a true team effort—thank you to Mackenzie Guest, Lauren Dobie, Nathanya Goudreau, Florence Piché-Lebel, Laurianne Fallu, Elliana Tomasso, and Mathilde Lefvert for your essential help in the field. Special thanks to Jean and Richard Gregson for hosting a Motus tower in their backyard for this project.

(2) We also want to thank our reviewers for providing insightful feedback. We are grateful to McGill University and the Social Sciences and Humanities Research Council (SSHRC) for funding this project, along with Environment and Climate Change Canada for providing 80 Lotek NanoTags across two field seasons.

(3) All birds were banded under Animal Use Protocol 2007-5446 from McGill University and federal banding permits 10973, 10973B, 10973D issued by the Canadian Wildlife Service, and radio-tagged under Animal Use Protocol 22BF01 and 23BF01 from Environment and Climate Change Canada.

(4) We declare no conflicts of interest.

(5) Marcel Gahbauer, Anne-Marie Cousineau, Kyle Elliott and Barbara Frei conceived the idea, design and experiment. Anne-Marie Cousineau performed the experiments. Anne-Marie Cousineau wrote the paper, and Kyle Elliott and Barbara Frei substantially edited the paper. Marcel Gahbauer provided valuable reviewing and editing input. Anne-Marie Cousineau, Barbara Frei, and Kyle Elliott developed and designed the methods. Anne-Marie Cousineau analyzed the data.

(6) Analyses reported in this article can be reproduced using the data provided by Cousineau (2025). Data from: Large winter home ranges in urban habitats for a very short-distance migrant, the Northern Cardinal (*Cardinalis cardinalis*)—ornithology / Ornithological Applications. Data DOI will be added once data deposition is completed.
